The Technical Education Center is one of buildings that came sprouting from the ground in August 2007. This \$49.5 million dollar building will house architecture, interior design, ornamental horticulture, automotive technology, computer-aided design, construction management, electro-mechanical technology, electronics-integrated engineering technology, HVAC-R, manufacturing

technology and welding technology programs.

A sneak peak tour of the building before spring break gives a glimpse of workers putting the finishing touches on the skeleton of what has become the TEC.

The dedication of the TEC will be on next Friday, April 24.
