| <p>-101320 Fetco coffee machine will not heat. Confirmed power to the unit 239.4 volts. confirmed the same power to the thermostat but thermostat will not send power to solid state or elements. The D9 LED is lit on a thermostat board which the thermostat and probe are not communicating with. Customer had another coffee brewer in another kitchen was asked to swap out parts so the coffee brewer and waters edge is working properly . Swapped out probe and thermostat board unit is heating up properly and heats to desired temperature. Amp draws 10.1 & 10.3 amps.</p> <p>-114210 Fetco Coffee machine. Diagnose before swapping out parts. Found power to the liquid level control board. But no power across terminals to the thermostat board. Unit has a faulty liquid level control board. Also had to swap out parts from this coffee machine to the other coffee machine to get it running properly . Swapped out the thermostat board. The unit will need to replace the thermostat board for this coffee machine as well .</p> | | | | |

| -111729 installed the panel and transformer conversion on the bakery oven on the second floor. Secured display panel. Ran through parameters in display and set up in selection, for a C model oven. After replacing parts. Make sure all parameters are correctly fired up unit and unit is cycling on and off in intervals of 27 seconds and 47 seconds. This indicates that the flame sensor is out of alignment. Removed four burner carriage assembly and removed flame sensor. Cleaned and adjusted. Put the burner assembly back together and fired up the unit. Oven is heating properly and does not kick off. Ran through calibration instructions. After calibration. Oven is heating up properly. Confirmed cavity temperature is matching probe temperature. Work complete. | | | | |
