COLLEGE OF DUPAGE

Physics 1180-001: Physics in the Modern Era: Quarks to Cosmos Spring 2020

Instructor: Dr. David R. Fazzini

Office: BIC-3E04B

Hours: Monday and Wednesday: 10:20 AM – 11:50 AM

Tuesday: 1:00 PM – 1:50 PM

Monday and Wednesday: 2:20 PM – 3:20 PM

Thursday: 4:00 PM – 5:00 PM Friday: 9:00 AM – 10:30AM

(Additional times available by appointment.)

NOTE: During some of my office hours, I will be found in the Physics Lab Prep

area (BIC-3E06) or one of the adjoining labs (BIC-3F03, -3F05, or -3F07).

Phone:630-942-3349E-mail:fazzinid@cod.eduMailbox:STEM DivisionFAX: 630-942-2759

Course Description:

Survey of physics of the twentieth century for the non-science major. Topics include relativity, quantum mechanics, elementary particles and cosmology. Topics of classical physics (mechanics, electricity, and heat) as a foundation are included. Semester Credit Hours: 3 (lecture hours)

IAI Course Code: P1-900 (for general education)

Prerequisites: MATH 0482 Foundations for College Mathematics II with a grade of "C"

or better, or equivalent or MATH 0465 Preparatory Mathematics for General Education with a grade of "C" or better, or equivalent.

Text: Revolutions in Twentieth Century Physics by D. J. Griffiths (required)

Material: Chapters 1-5

Keypad: iClicker

Supplement (required): The New World of Mr. Tompkins by G. Gamow & R. Stannard

Location: BIC-2521 (Lecture) Time: MW: 1:00-2:15 PM

Course Objectives:

Upon successful completion of the course the student should be able to do following:

- 1. Convert different units of measure
- 2. Express physics quantities using scientific notation

- 3. Express numerical results using appropriate significant digits
- 4. Explain relationships among an object's position, displacement, velocity, and acceleration
- 5. Apply Newton's laws of motion
- 6. Distinguish different types of forces
- 7. Apply conservation laws to deduce the outcome of physical events
- 8. Calculate different forms of energy (kinetic, potential, thermal)
- 9. Describe how energy is converted from one form to another
- 10. Describe the relationship among amplitude, frequency, period, wavelength, and speed of a wave
- 11. Calculate positions of maximum constructive and destructive interference for waves
- 12. Identify Einstein's postulates of special relativity
- 13. Recognize the constancy of the speed of light as the basis for special relativity
- 14. Calculate time dilations and length contractions for frames in relative motion
- 15. Calculate relativistic energy and momentum
- 16. Summarize the physical problems that led to the formulation of quantum mechanics
- 17. Explain the photoelectric effect
- 18. Recognize the meaning of the wave function in terms of probabilities
- 19. Calculate the uncertainties using the Heisenberg uncertainly principle
- 20. Explain the concept of quantum tunneling
- 21. Calculate the spectral line properties (energies, frequencies, wavelengths) of a hydrogen atom using the Bohr model
- 22. Describe the Pauli exclusion principle and its relationship to the periodic table of elements
- 23. Differentiate among the major types of radioactive decay processes (alpha, beta, gamma) in unstable nuclei
- 24. Describe the concepts of nuclear binding energy and its transformation into thermal energy in fission and fusion reactions
- 25. Identify the fundamental forces of nature (strong, weak, electromagnetic, gravity) and the field particles according to the Standard model
- 26. Apply conservation laws to determine allowable and forbidden particle interactions
- 27. Interpret simple Feynman diagrams
- 28. Use the Hubble law to calculate recessional velocities
- 29. Recognize the cosmic microwave background as evidence for the Big Bang
- 30. Explain the formation of light and heavy elements
- 31. Describe our current understanding of dark matter and dark energy

Course Logistics:

GENERAL COURSE INFORMATION can be found through the class webpage:

https://cod.edu/faculty/websites/fazzinid/physics-1180.aspx

and the **Blackboard** website: https://bb.cod.edu/webapps/login/

Check the class webpage regularly for general announcements and assignment updates. The site will provide important announcements and course updates such as reading and written homework assignments. The class web page will be updated on a regular basis. In general, the **Blackboard** site will only be used for grade dissemination.

READING assignments will be announced in class and posted on the class webpage. It is assumed that you have read the assigned material by the due date (see QUIZZES). Check the class webpage regularly for assignment updates.

READING and HOMEWORK assignments will be provided online using the *FlipItPhysics* homework system found at the following URL below:

https://www.flipitphysics.com/Account/LogOn?ReturnUrl=%2f

You will need to subscribe to *FlipItPhysics* at a nominal cost. You will also need the following (case sensitive) access key: **1180Sp20FD**. The homework for the entire term is in the process of being generated. Check the *FlipItPhysics* calendar regularly for assignment updates.

The homework will consist of two types: *Homework Questions* and *Homework Exercises & Problems*. The *Homework Questions* consist of 10 or so multiple-choice questions and are based upon the reading and discussions from the assigned chapter(s). These tend to be conceptual in nature, but may also require a simple calculation. These *Homework Questions* must be submitted by **12:30 PM** on the due date unless otherwise announced. Once the final cut-off time has elapsed, you will not be able to submit answers or make any further changes. (In addition to the *Homework Questions*, short in-class exercises are used to monitor conceptual understanding. [See iCLICKERS.] These can typically be answered by keeping up with the reading assignments and class discussions.)

The *Homework Exercises and Problems* assignments typically consist of several computational exercises and are also due at **12:30 PM** of the date shown. In general, these assignments involve a numerical answer and may be printed for off-line completion if you desire. You may return to the computer to enter your answers and then submit. Only the electronic submissions will be accepted (prior to the cut-off time) for credit.

Be aware that it is very important that you make an honest attempt to work through the questions, exercises, calculations and problems since doing the homework is a primary technique for learning the material. It is also very important that you be able to understand the solutions conceptually rather than just memorizing formulas since the

exam questions and problems generally require you to demonstrate application of the concepts being assessed. Be sure that you can answer any assigned question or solve any assigned problem since they may appear on an exam. It is your responsibility to seek assistance from your instructor and/or other resources if you are having difficulties.

QUIZZES consisting a few multiple-choice, matching, or short response questions based upon the chapter/section(s) reading assignment due that day are administered with warning or without warning prior to the start of each section of the text—essentially every class. (You must be in class for the quizzes at the time they are administered. There are no "make-ups." However, there will be extra credit quizzes administered from time to time.) These are primarily designed to make sure that students keep up with the assigned reading and thus have some familiarity with the topics that are about to be discussed.

iCLICKERS need to be purchased by each student. The system will allow you to further interact with the instructor during the lecture. You will be able to respond to questions and give feedback as the course progresses. The questions typically consist of surveys, conceptual questions or short calculations and are designed to uncover some of the common pitfalls and surface possible misconceptions and that confuse many students. Students are encouraged to participate in small group discussions with classmates while answering these questions. Responses are recorded and scored. The scoring is used as a measure of class attendance and participation and may be used for as part of the final grade determination (particularly in borderline situations).

EXAMS will consist of three "one-hour" exams and a "2-hour" final exam. The one-hour exams and the first hour of the final exam typically consist of about 30 multiple-choice questions and 5-8 "short answer" problems. The final exam is comprehensive and typically has about 100 multiple-choice questions. The questions and problems are derived from homework sets, sample problems from the text and examples worked in class. All exams are closed book and closed note. However, you will be provided with a sheet of "possibly useful information" that contains formulas, constants, etc.

Tentative Exam schedule:

Exam I:	1:00 PM-2:15 PM, Monday, Feb. 24th	Sections 1.1-2.2
Exam II:	1:00 PM-2:15 PM, Monday, Apr. 6th	Sections 2.3-3.3
Exam III:	1:00 PM-2:15 PM, Wednesday, May 6th	Sections 4.1-5.4
Final Exam:	1:00 PM-2:50 PM, Wednesday, May 13th	Sections 1.1-5.4

NOTE: Not every topic in the each assigned section may be discussed in class. However, you are responsible for every topic in each assigned chapter unless otherwise stated. If you are having trouble with a topic that is not discussed in class, it is your responsibility to seek out the instructor and/or other resources to ensure understanding of that topic. Also, the instructor reserves the right to substitute a written research project for the third exam. The topics for such a project will be provided by the instructor. Details forthcoming.

GRADING is tentatively based on the following breakdown:

Homework:	150 points	A: > 900 points
Quizzes / Clickers:		B: > 800 points
Exam 1:	150 points	C: > 700 points
Exam 2:	150 points	D: > 600 points
Exam 3/Project:	150 points	F: < 600 points
Final Exam:	250 points	

Depending on other factors involved with the course, it is possible for the grade cut-offs to be lowered by up to 50 pts., but do not count on it.

PARTICIPATION in the course can have a reflection in the overall final grade. Items such as attendance, attitude, sincerity, changes in performance, keypad scores, and iClickers will be considered in borderline situations.

LATE MATERIAL & MAKE-UPS:

All quizzes and exams must be completed on the scheduled date at the time they are scheduled. There are no make-ups for any reason (except jury service or call to active military duty). If absent for either "one-hour" exam, then the score of the final exam will be applied to one (and only one) missing exam.

All online homework must be submitted by the cut-off time as determined in the online homework system.

CALCULATORS. LAPTOPS & CELL PHONES:

Students may use their own calculator during exams. There is no sharing of calculators during exams and NO CELL PHONES CALCULATORS may be used during exams.

Students may use laptop computers or tablets to take notes during lecture only under the following conditions: 1) the screen must be horizontal on the desk so that I can see it at any given time and 2) you email a copy of that day's notes within 10 minutes after the end of class. If these conditions cannot be met, then you may not use the device in class.

WITHDRAWAL POLICY:

The last day to withdraw from this course is Friday, April 10th, 2020. After that date, students may file a *Petition for Late Withdrawal* through the Registration Office. A *Petition for Late Withdrawal* will be granted for extenuating circumstances only, including student illness, death in the immediate family, family emergencies, call to active duty, or other appropriate extenuating circumstances. The student will be required to provide appropriate documentation for all requests for late withdrawal. Students are strongly encouraged to speak to their instructor prior to withdrawing from this class.

INCOMPLETE POLICY:

Under extraordinary circumstances (such as an extended medical emergency or family tragedy) a student currently earning "C" or better may not be able to complete all of the course requirements. In such instances, the student may petition the instructor for an "incomplete" grade. Only if the instructor deems the request as warranted will a contract

agreement be made between the student and instructor as to how the course will be completed. After both the student and the instructor sign the contract, the student will receive a grade of "I". Note: The course must be completed with the same instructor and within one calendar year of the end of the term for which the student was enrolled. If the student does not complete the requirements for the course as prescribed in the agreement, the "I" grade will automatically revert to a grade of "F." It is advised that the students be fully aware of the consequences of receiving an incomplete grade and understand the terms described in the COD Catalog, p. 155: *Grade of Incomplete*.

CONDUCT:

ATTENDANCE/TARDINESS:

In general, formal attendance is recorded by means of "iClickers" and submitted quizzes. Students who have missed 5 or more classes or labs AND are not passing with a grade of "C" or better by Wednesday, March 11th, 2020 will be considered in "non- pursuit" and may be dropped from the course by the instructor. Students who do not "click in" during the class do to tardiness or any other reason will not necessarily have their attendance recorded.

CONDUCT & DISRUPTIONS:

The proprietors of any cell phone or other device that are heard to go off in class or the lab ensure themselves a "0" on the next Quiz. Disruption during an exam will result in 5-point deduction off that exam score (10 points if during the final exam).

It is expected that you are aware of and follow the guidelines for conduct as described in the COD Catalog, p. 162-163: *Student Rights and Responsibilities*. In particular, *Student Code of Conduct (Board Policy 20-35)*. Individuals that exhibit disruptive behaviors that interfere with the lectures and/or laboratory sessions will be removed from the class so that those individuals who wish to learn physics can do so. Those individuals removed must then conference with either the Dean or an Associate Dean in Natural & Applies Sciences Division. Those individuals may then rejoin the class pending the outcome of the conference.

Anyone caught cheating or plagiarizing will receive an automatic failure for the course. You will not be allowed to drop the class if you are found in violation of this section. It is expected that you are aware of and follow the guidelines for conduct as described in the COD Catalog, pp. 163-164: *Students Code of Academic Conduct (Board Policy 20-41)* and that you are aware of the definitions of the terms described therein.

Also, the college will not tolerate discrimination or harassment. It is also expected that you are aware of and follow the guidelines for conduct as described in the COD Catalog, page 167: *Prohibition of Discrimination, Harassment and Sexual Harassment (Board Policies 15-10 and 15-11)*.

COMMUNICATION:

You should only use email as a method to set up a face-to-face meeting with me if my regular office hours conflict with your schedule. The subject line should read, "Meeting request." In your request, include at least two times when you would like to meet and a

brief (one or two sentence) description of the reason for the meeting. Emails sent for any other reason will not be considered or acknowledged. You are strongly encouraged to ask questions about the syllabus during class time. For more in-depth discussions (such as guidance on assignments) plan to meet in my office. You can also call my office. Our conversations should take place in person or over the phone rather than through email. This allows us to get to know each other better and fosters a more collegial learning atmosphere. Otherwise, the only other email would be your course notes that you took if you used a laptop. The subject line should read, "Physics 1180 Notes (date)".

RETURN POLICY:

In general, every effort will be made to return work in a timely fashion usually within one week after submission.

COURSE EXPECTATIONS

What Dr. Fazzini Expects from You:

- You will have read the syllabus.
- You will be punctual to class.
- You do not make or receive telephone calls or text messages during class or lab sessions.
- You demonstrate respect for what I and your fellow students have to say.
- You will come to class prepared (pencils, calculator, iClicker, etc.)
- You will come to class ready to ask and answer questions of substance on the day's topic(s).
- You will concentrate exclusively on this course during the class hours of this course
- You will notify me prior to class if you have to leave early.
- You will only use email as a tool to set up a face-to-face meeting with me.
- You will "check your entitlement at the door" and take responsibility for your own learning.

What You Can Expect from Dr. Fazzini:

- I will be punctual to class.
- I will give each of you a fair share of my attention.
- I will work to make the class interesting and relevant.
- I will make myself available as a helpful resource outside of class.
- I will work to help you learn the material and perform at your best.
- I will be the sole arbiter of partial credit.
- Emails sent to me that do not express a face-to-face meeting request with a short description of the reason for the request (and a proposed meeting time if outside of regular office hours) will not be acknowledged.
- I will grade the QUALITY of your work rather than the amount of time and effort you spent on it. (In other words, you will be assessed on your demonstrated performance rather than on anecdotal testimony.)

PHYSICS 1180 TENTATIVE LECTURE SCHEDULE for Spring 2020 Semester

Week	Dates	Section(s)	Topic(s)
1*	Inn. 22	Introduction	(Syllabus)
	Jan. 22	1.1	Units, Measurement & Scientific Notation
2	I 27 20	1.2	Kinematics & Forces
	Jan. 27-29	1.3	Universal Gravitation & Coulomb's Law
3	Eab 2.5	1.4	Conservation Laws
	Feb. 3-5		Momentum, Energy & Charge
4	Feb. 10-12	1.5	Wave Motion
	reb. 10-12		Interference & Standing Waves
5	Feb. 17-19	2.1	Einstein's Postulates of Special Relativity
		2.2	Time Dilation & Length Contraction
6	Feb. 24-26	Exam I	Sections 1.1-2.2
	reb. 24-20	2.3	Paradoxes
7 N	Mar. 2-4	2.4	Relativistic Mechanics
	Mar. 2-4		Momentum & Energy
8	Mar. 9-13	2.5	Spacetime
		3.1	Photons & Matter Waves
9	Mar. 16-18	3.2	Bohr Model
7		3.3	Quantum Mechanics
10	Mar. 23-25	Exam II	Sections 2.3-3.3
		4.1	Atoms & Periodic Table of Elements
11	Mar 30 - Apr. 1	NO CLASSES	SPRING BREAK
12	Apr. 6-8	4.2	Radioactivity & Nuclear Reactions
		4.3	Elementary Particles & the Standard Model
13	Apr 12 15	Apr. 13-15 4.4	Interactions
	Apr. 13-15		Feynman Diagrams
14	A 20, 22	5.1	Big Bang & Evolution of the Universe
	Apr. 20-22		Stars, Galaxies & the Hubble Law
15	Apr. 27-29	5.2	Blackbody Radiation
		5.3	Cosmic Background Radiation
16	May 4-6	5.4	Dark Matter & Dark Energy
		Exam III/Project	Sections 4.1-5.4
17*	May 15	Final Exam	All covered material: Sections 1.1-5.4

^{*} Shortened week due to King holiday or final exams.

Your first lecture takes place on Wednesday, January 22nd starting at 1:00PM.

There are NO CLASSES on the following dates:

Monday, January 20th due to Dr. Martin Luther King Holiday Monday-Friday, March 30th-April 3rd due to Spring Break

Detailed Topical Outline:

- 1. Units and scientific measurement
- 2. Scientific notation
- 3. Kinematics (position, velocity, acceleration)
- 4. Forces
- 5. Universal gravitation and Coulomb's law
- 6. Conservation laws (energy, momentum, charge)
- 7. Momentum
- 8. Energy
- 9. Wave description and motion
- 10. Wave interference and standing waves
- 11. Einstein's postulates of special relativity
- 12. Time dilation and length contraction
- 13. Simultaneity
- 14. Twin paradox
- 15. Relativistic mechanics (energy, momentum, mass)
- 16. Spacetime
- 17. Wave-particle duality
- 18. Photons and the photoelectric effect
- 19. deBroglie hypothesis
- 20. Uncertainty principle
- 21. Quantum tunneling
- 22. Bohr model of the atom
- 23. Atoms and the periodic table
- 24. Radioactivity
- 25. Nuclear reactions
- 26. Fission and fusion
- 27. Elementary particles (hadrons and leptons)
- 28. Standard model
- 29. Interactions and Feynman diagrams
- 30. Big bang and evolution of the universe
- 31. Blackbody radiation and the cosmic microwave background
- 32. Dark matter and dark energy

Disclaimer:

To the best of the instructor's knowledge, the information in this syllabus was correct and complete at the start of the semester. However, the instructor reserves the right, acting within the policies and procedures of the College of DuPage, to make changes in the course content, instructional techniques or grading policy during the term. (Any changes would always be in favor of the student.) It is assumed that you have read this course syllabus. Your continued enrollment in this course means that you accept the terms and conditions outlined in this syllabus.
